

Insect Control Program for Chinch Bugs and White Grubs

*Does your lawn look sick? Do you have dead spots, Thin grass areas,
Dirt showing?*

*You may have a damaged lawn from insects.
We can help!*

The last several years have been very hard on grass areas due to heat conditions and a lack of any moisture. Insects thrive in these conditions. Because of city regulations on watering, homeowners have had a very difficult time keeping up with watering their lawn, resulting in stressed out grass conditions.

We can help!

The first step is to control the insects with our insect control program. Once the insect problem is under control, Overseeding or Sod may be necessary to help these areas in recovery. Carlson Lawn & Landscaping can help you with our experienced staff in the recovery of your damaged lawn areas.

*Remember this. If you do nothing you will see nothing!
A healthy lawn is a happy lawn and good for the environment.*
