

Carlson Lawn & Landscaping *4 Application Lawn Care Program*

It's all in the fertilizer! A healthy weed free lawn starts with the proper fertilizer. Our Lawn Care Program uses only slow release fertilizer. This in return will give your lawn a slow feed and less chance of summer burn - out. Our slow release fertilizer will also help prevent nitrogen run off into our quality water supply here in the Twin Ports area. Yes, slow release will cost a few dollars more, but the results and benefits are worth it!

4 Applications

1st Application (May early June) Our slow release fertilizer is applied for a long spring feeding.

2nd Application (June) Dandelion and broadleaf weed control is applied with our balanced slow release fertilizer.

3rd Application (July-August) Weed control is applied with our balanced fertilizer.

4th Application (September-October) Weed control is applied if necessary along with a heavy fall feeding of our slow release fertilizer to help winter your lawn.

OUR GUARANTEE

We will apply quality products and service to help the maximum potential of your lawn.
